Preuse:
$$J = AJ_i$$

On a montré dans le cours que: $\vec{\alpha}_R = \vec{\beta}_R + \vec{\tau}_R \vec{\beta}_R \wedge \vec{O}_i \vec{O}_m$

On pose (pour allique les notations): $\vec{O}_i \vec{O}_m = \vec{P}_i \vec{m}$

A vient: $\vec{\alpha}_R = \vec{\beta}_R + \vec{\tau}_R \vec{\beta}_R \wedge \vec{P}_i \vec{m}$
 $= \vec{\beta}_R - \vec{\tau}_R \vec{P}_i \vec{m} \wedge \vec{\beta}_R \wedge \vec{P}_i \vec{m}$

préproduit ve do riel: elle "transforme" les produits vertoriels en produit

primoduit vertoriel: elle Fransforme les produits vertoriels en produits matrice de primoduit vertoriel: elle Fransforme les produits vertoriels en produits matricels. Elle re construit directement à partir de Pin selon la formule indiquée dans le cours. Soient 2 vecteurs re et à dont on vent calculer le produit vectoriel: ren vir = U vi == -v n vir - V vir où t et V sont calculées avec la formule du cours.

=> On vient de montier que : $\vec{\alpha}_k = \vec{\beta}_k - \vec{\gamma}_k \vec{P}_{\vec{k}} \vec{k}$ d'h peut donc de ré-enire comme sout:

Le
$$\overrightarrow{R}_{k} = (\overrightarrow{I} - \overrightarrow{P}) (\overrightarrow{\beta}_{k})$$

De même, nous awan:

Let $\overrightarrow{R}_{k} = (\overrightarrow{I} - \overrightarrow{P}) (\overrightarrow{\beta}_{k})$
 $\overrightarrow{R}_{k} = (\overrightarrow{I} - \overrightarrow{P}) (\overrightarrow{R}_{k})$
 $\overrightarrow{R}_{k} = (\overrightarrow{R}_{k$

Nous venons danc d'exprimer une colonne de J en fonction de celle de J; et en faisant apparaître 1. Nous pouvons alors offiner les évitures:

Alors chaque colonne Cop de J s'écrit comme suit en fet de la colonne Dk de Ji: Ch = ADk . Et de plus: $T = (C_1 C_2 ... C_m)$ prisque $J = (\overline{C_1} C_2 ... \overline{C_m})$ $T = (AD_1 AD_2 ... AD_m)$ (1)

On peut alors factorises par 1 à gauche de l'équation (1) et il vient:

$$\mathcal{J}_{z} = \mathcal{A} \left(\begin{array}{c} D_{n} \\ \downarrow \end{array} \right), \quad \mathcal{J}_{z} = \left(\begin{array}{c} \overline{\beta_{n}} \\ \downarrow \end{array} \right), \quad \overline{\beta_{n}} = \left(\begin{array}{c} \overline{\beta_{n}} \\ \downarrow \end{array} \right), \quad \overline{\beta_{n}} = \left(\begin{array}{c} \overline{\beta_{n}} \\ \downarrow \end{array} \right), \quad \overline{\beta_{n}} = \left(\begin{array}{c} \overline{\beta_{n}} \\ \downarrow \end{array} \right), \quad \overline{\beta_{n}} = \left(\begin{array}{c}
